

# Tool Rack Assembly Instructions

Here are the parts you should have received in your package

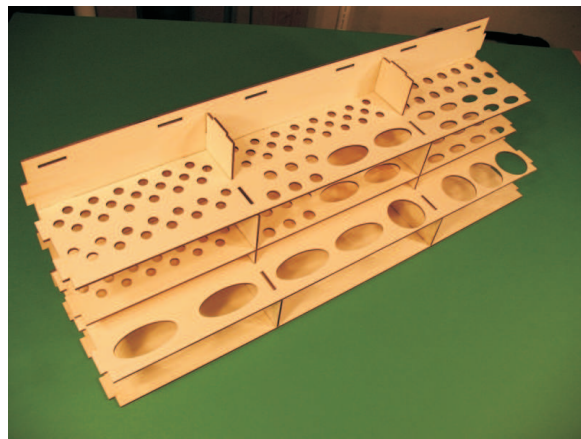

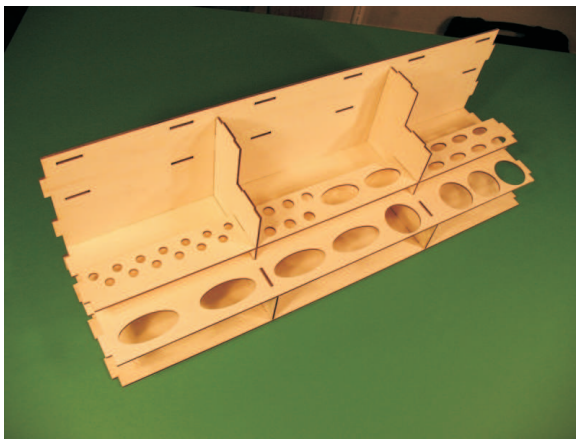

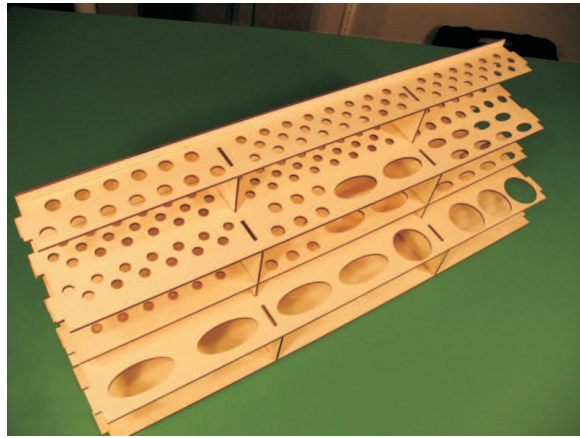

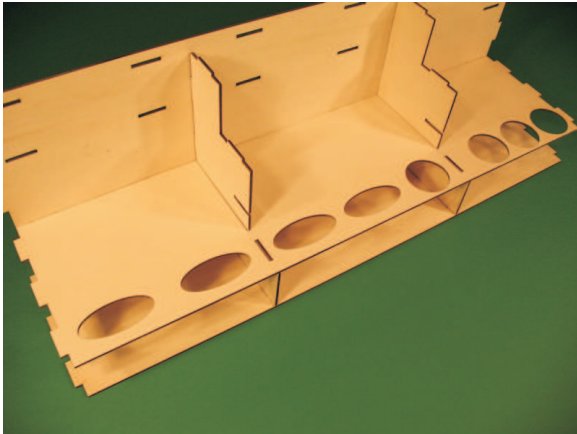

If you want your rack to sit on top of your bench then the first step is to remove the overhang part from the back sheet.

There are several ways to assemble. This is one way. Start by gluing the uprights to the bottom and back.

The best glues are med CA, PVA (white glue), woodworking glue or epoxy.

Then install each of the shelves in the order shown. Glue each to the uprigths.

Last step is to glue the sides to the assembly.

You are now done. If used indoors no finish is required, but, you can paint or varnish as desired.
